

RFQ British Auction System

High Level Design — Architecture, Flows & Real-time Events

1. System Architecture Overview:

Three-tier layout: clients at top, server in the middle, database at the bottom.

1 — System architecture overview

2. Authentication Flow:

Sign-up and sign-in as a top-down sequence showing client, server, and database interactions.

3. RFQ Lifecycle:

RFQ auction lifecycle. State machine showing all four statuses and what drives each transition.

4. Bid Placement + Trigger Window Extension:

Step-by-step decision flow from bid submission through rank computation to the extension decision tree.

5. Cron Job & Socket.io Real-time Events:

Two side-by-side panels showing how the scheduler drives lifecycle changes and how events propagate to clients.

5 — Cron jobs + Socket.IO
